Introduction

• Outing system is a web based system for managing boarding school students’ outing information.
• This system is developed to renew the manual systems used by the boarding school which is outing book system.

Problems Statement

• Students tend to imitate warden’s signature without permission to go outing.
• Administrative staffs having a hard time to organize students’ outing information.
• The current system used is time consuming because of students’ outing information need to be checked one by one.

Objectives

• To eliminate the imitation of warden’s signature by the students to get permission for outing.
• To help administrative staff in organizing students’ outing information.
• To make outing process more efficient.
